Roselawn *Leghorns Pay*

The Roselawn English S. C. White Leghorn is a logical answer to an urgent need for a larger type Leghorn, which at the same time retains the heavy laying characteristic.

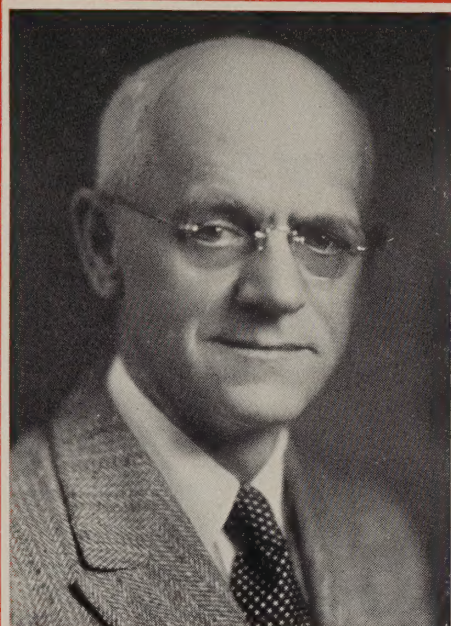

Leghorns of the Tom Barron strain meet this need in rich measure because they have been bred for more than 30 years for *large body size, heavy egg production and big, chalk white eggs.*

They have proven their superiority beyond a doubt in the highly competitive egg contests in America and Europe and in the hands of the practical poultry raisers. Today, they are generally recognized as the most profitable strain in the world.

Our Personal Message and Pledge to You

OUR catalog is our messenger and when the postman leaves it in your mail box, he has brought you the most personal message that we are able to write. We hope you will enjoy it because in every word and photo we try to make it reflect the same high quality and conscientious effort that we put in our management of Roselawn Poultry Farm.

More than that, we hope it will convey to you the message of profit which Roselawn Leghorns can bring to you just as they have to us. The Roselawn strain is a wonderful strain and every hatching egg, chick or breeder that we send out is truly a fine representative of the best English Leghorn blood.

But we go further than that. You *must be satisfied* with your purchase from Roselawn.

Roselawn's policy is built around that one word "satisfaction" and we make it our business to see that every customer is completely satisfied. When you send your order to Roselawn you can depend upon it that it will have our personal attention and that we will make a personal selection. In addition to this is the fact that every chick or breeder that we sell has been produced through our honest effort and comes to you with our broad and liberal guarantee.

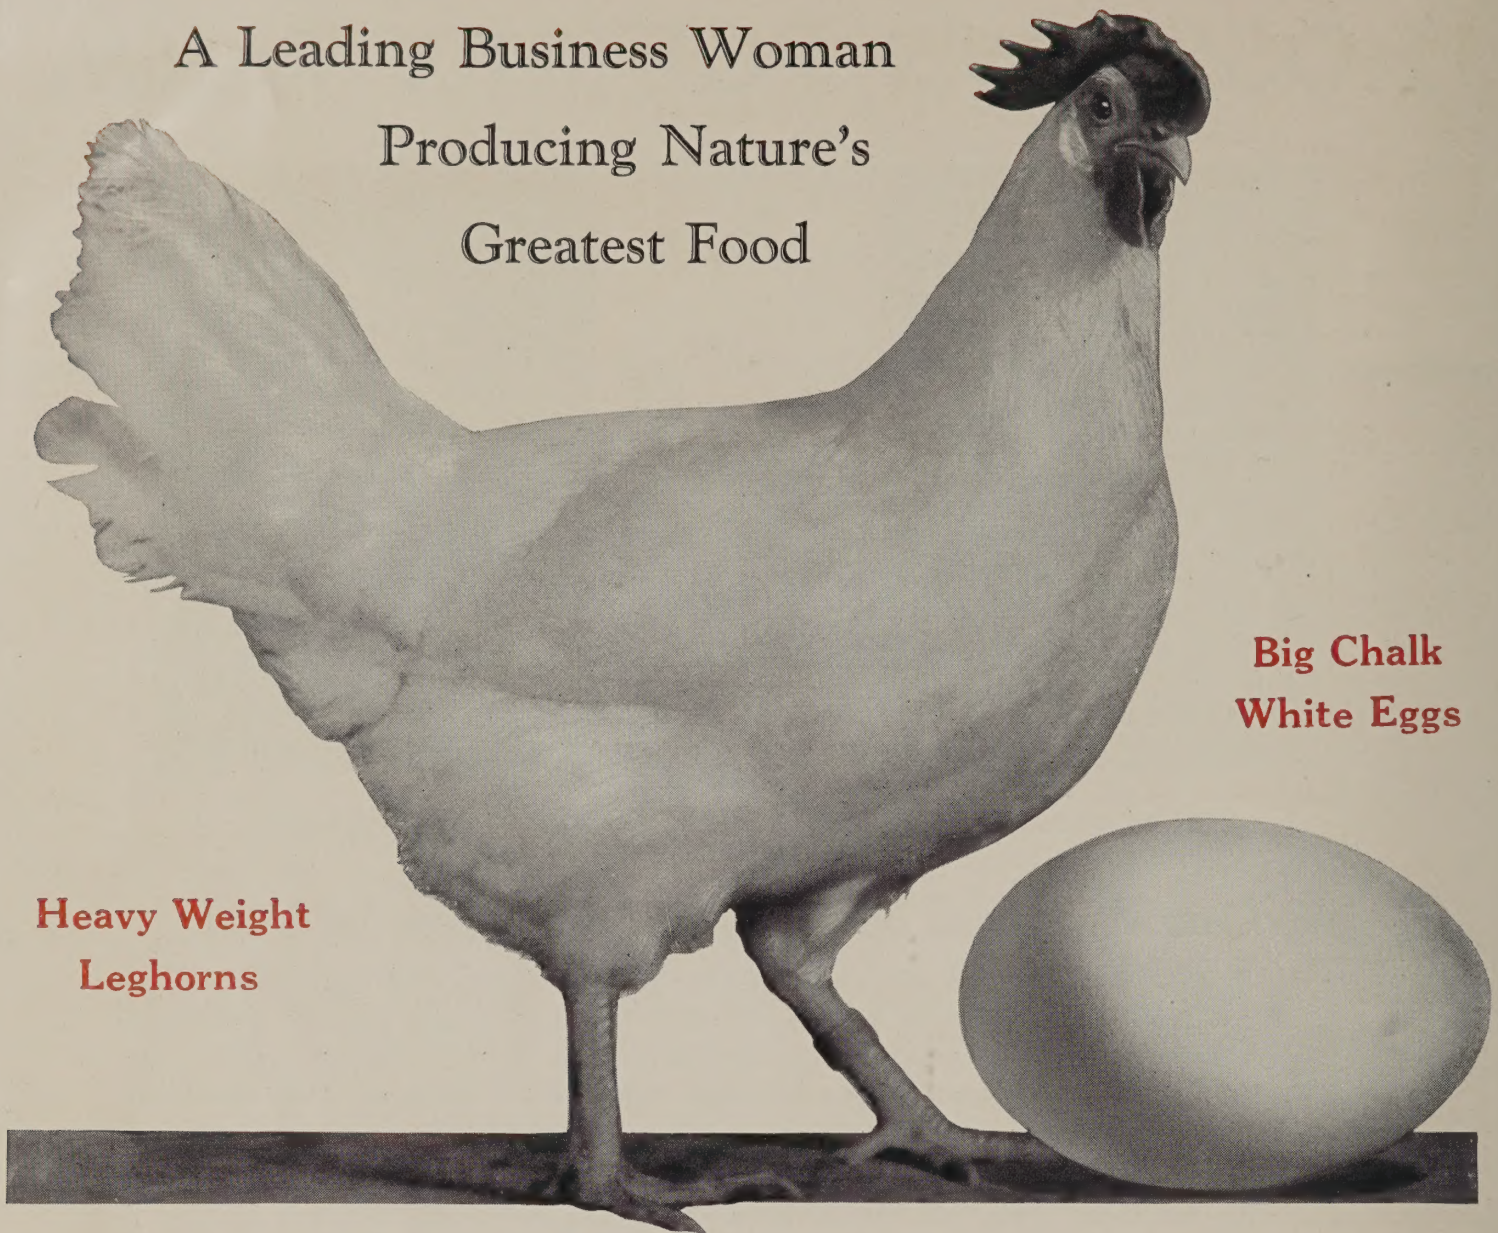

Our customer friends know this and to those of you who have never purchased from us, we repeat again our pledge of satisfaction in the strictest sense of the word.

Yours sincerely,

H. M. Tibbals

Heavy Weight
Leghorns

Big Chalk
White Eggs

ROSELAWN English S. C. White Leghorns

- ① Large type—our breeding hens are selected for large size, correct body type, and their proven ability to lay heavily. They must be heavy fall and winter layers.
- ② Roselawn imports many high egg record breeders direct from Mr. Barron in England. (See pedigrees and egg records on pages 10 and 11.)
- ③ Roselawn breeders produce eggs that weigh from 24 ounces to 28 ounces to the dozen which insures big type, strong, healthy chicks and profitable pullets.
- ④ A flock of pullets from Roselawn stock will conservatively average 180 to 225 eggs or more. This high average is practically sure with reasonably good care.
- ⑤ Eggs are pure chalk white in color and well shaped.
- ⑥ Roselawn birds are bred for early maturity which means high winter production in pullets and early heavy broilers in cockerels.
- ⑦ Roselawn birds are late moulters and bred for exceptional vigor and health. We never force our birds for egg production. They are *natural* heavy layers.
- ⑧ In the production of eggs for commercial purposes Roselawn Poultry Farm has shown a profit from the very first year of operation. This is an example of what you can do with Roselawn English White Leghorns.

Years of Constructive Breeding Back of Roselawn Big Type Leghorns

IN telling you about the breeding back of Roselawn big type English Leghorns, I am going to avoid scientific breeding terms. We recognize the principles of Mendelian Law and are constantly studying the old and new experiments in poultry breeding. We follow proven principles closely.

At the very start of the craze for big egg records, the Tom Barron birds were introduced in some of the leading egg contests in this country. Backed by 30 years of intensive production breeding they created something of a sensation by their remarkable winnings. Although in considering their high record winnings, many people lost sight of their true all-around worth.

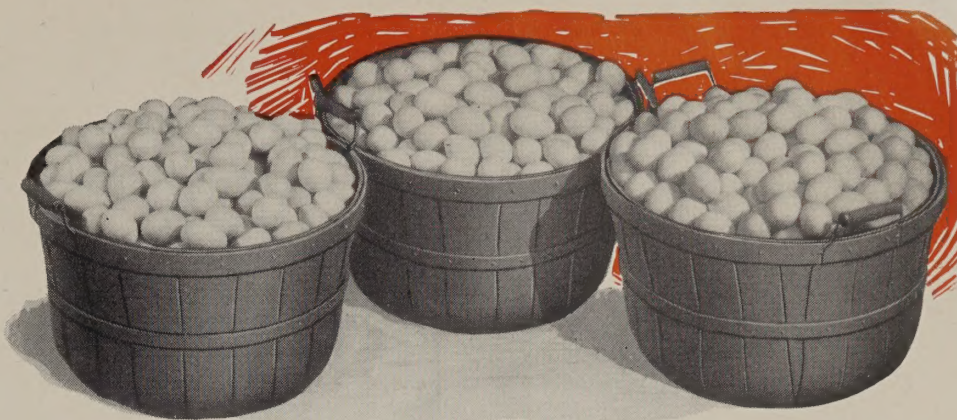

Layers of Large White Eggs

I refer to the ability of the Barron Leghorns to *lay large eggs*, as well as their ability to *reproduce offspring* which give high flock averages in egg production. These two points must be taken into consideration when we consider poultry profits.

Mr. Barron also recognized the need for a *big type Leghorn* and birds of his strain today are real heavy weights.

At the time the Barron Leghorns were first introduced to America we heard about them. Advance reports seemed to indicate that here was the type of bird we have been looking for. After watching their performance in egg contests and studying their breeding we entered into correspondence with Mr. Barron. This quickly led to our first importation and a business relationship between ourselves and Mr. Barron, which it is a real pleasure to acknowledge.

We have faithfully adhered to the breeding principles established by Mr. Barron in his long

Big chalk white eggs from big heavyweight Roselawn Layers make big healthy chicks.

years of experience with the Barron strain. Frequent importations of new blood direct from England have developed several fine families of this strain at Roselawn and we are continually working to improve our birds.

Today, the results of our own breeding have been adding to those of Mr. Barron and we feel that Roselawn Leghorns are true measures of the highest value in English Leghorn breeding in America.

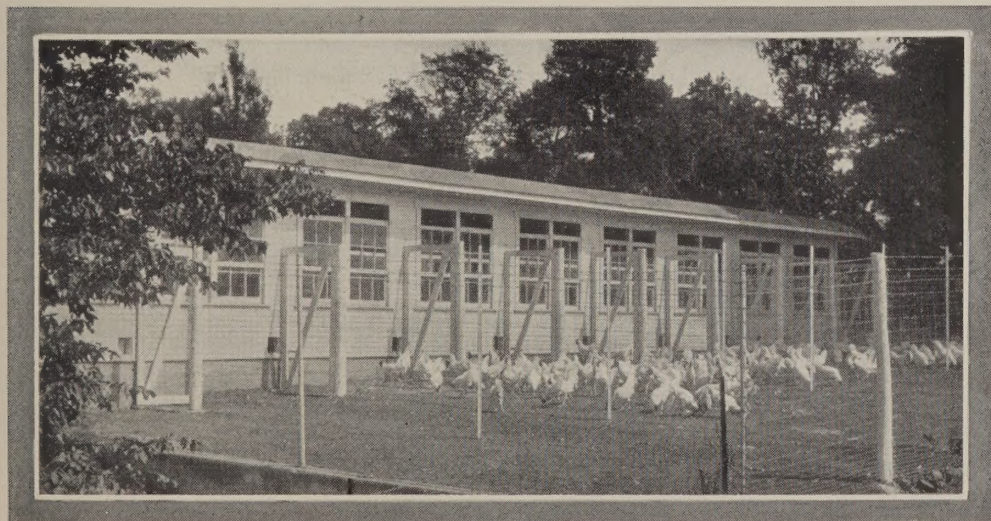

Pullets Mature Quickly and Lay Early

Roselawn pullets are exceptional long distance layers. They mature quickly and come into natural production at an early age. A large percentage of our pullets in every hatch become profitable layers. This is a true test of any strain.

Roselawn Leghorns are heavy and when placed on the scale, a six months' pullet will often weigh from 4½ to 5 pounds, or more. This extra weight gives them the vigorousness and vitality so necessary in a heavy laying strain, and I do not think there is a finer, quicker growing broiler than our Leghorn Cockerels.

In fertility and hatchability eggs from Roselawn run very high. Also the livability of chicks. Every year we raise 95% of the chicks we brood. In fact, this figure is conservative. Although we raise thousands of chicks our mortality rate is often nothing for days at a time during the brooding season.

As a matter of fact, the more familiar you are with the good breeding characteristics, the more enthusiastic you will become about the birds of the Roselawn English strain. These hardy early maturing, big type birds will pay you a good profit month in and month out with a reasonable amount of care and attention.

A view of our Trapnest-Pedigree Breeding house. Many of these birds have OFFICIAL records made at egg contests. All of them have high records.

Your success is more certain with Roselawn stock

ROSELAWN--A Real Egg and Breeding Farm

Here we test out the ability of Roselawn Leghorns to produce at high speed in large flocks. One of the big advantages of Leghorns is this remarkable ability. Large flocks save labor and housing expense in producing eggs economically. No other breed does as well as Leghorns in this respect.

ROSELAWN Poultry Farm is not an ordinary hatchery with no birds, but a big commercial egg and breeding establishment with several thousand carefully selected breeders right here on our farm. Our matings are made with the greatest care, having in view the continual improvement of our stock from year to year.

We import high egg record pedigreed birds direct from Mr. Barron regularly. When ordering these birds we always specify extra large birds with big combs, and we have Mr. Barron's assurance that he makes the selection for us personally, and that the birds sent to us carry the direct blood lines from his leading contest winning pens. Many of the males we produce from these highly bred imported birds are sold to our customers and others are used in our breeding pens. Every breeding hen is carefully selected for her egg-

laying proclivities. She must measure up to our high standard or she is not used. She must be a heavy fall and winter layer, her eggs must be extra large and chalk white. She must have a big red lopped comb, pure white plumage and be of correct body type.

A careful system of trapnesting and pedigreeing with all our master matings insures that only the highest type of birds are used as breeders. This, together with our importations of high record birds direct from Mr. Barron, has built up a wonderful strain of all season layers that is very gratifying to ourselves, and the cause of much favorable comment from those who visit our plant.

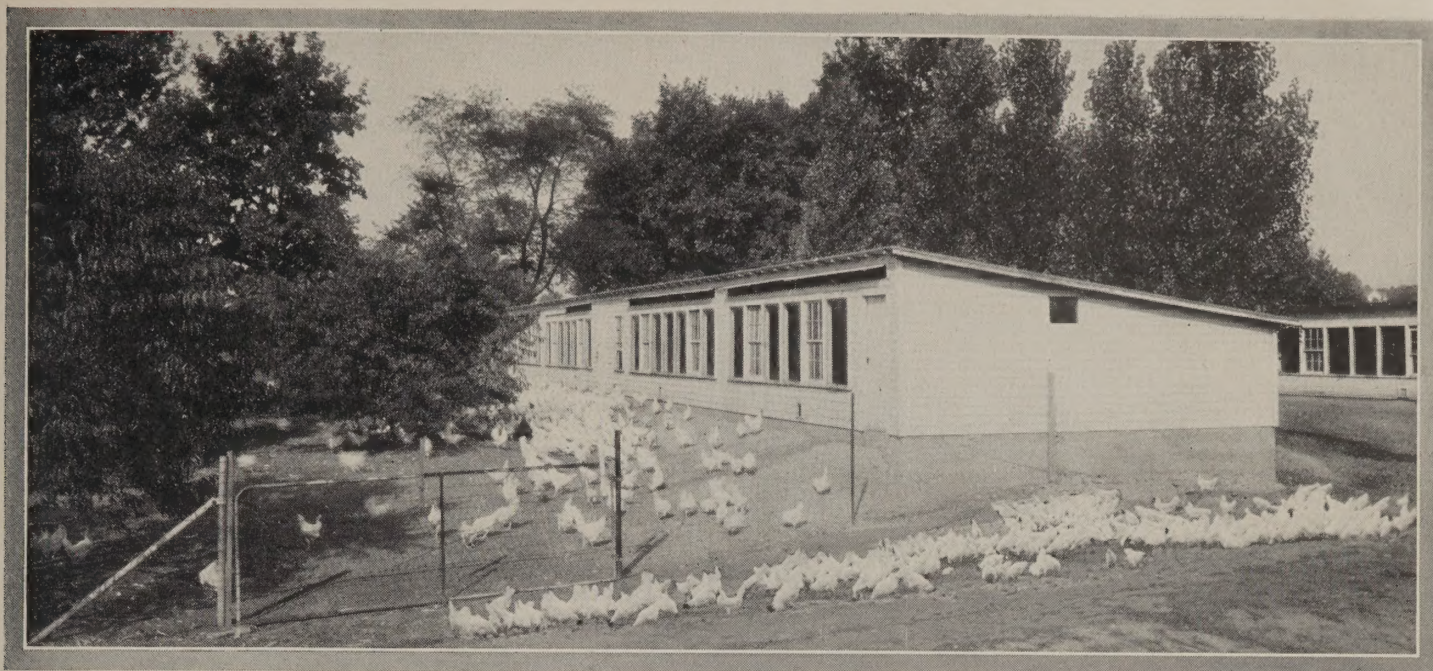

All of our matings are kept in large, roomy, fresh air houses which allow plenty of room for exercise and insure the highest degree of fertility in the eggs and chicks of exceptional vitality.

Our Leghorns have been bred for combined big weight and early maturity. Thus they not only start to lay at an early age, but they have the body weight which is so necessary to carry them through a long period of continuous profitable laying. See the Egg Price Chart on opposite page for the reason why these combined characteristics are so important.

Success With Roselawn Leghorns

Anyone with a Genuine Liking for Poultry Can Succeed

Roselawn breeders enjoy modern quarters with ideal free range and plenty of shade. Good egg fertility and strong, husky chicks, are assured with these favorable surroundings.

I BELIEVE that anyone with a genuine liking for poultry can make a big success by starting today with English White Leghorns from Roselawn. My belief is based on our own success and that of hundreds of Roselawn customers, many of whom started with no capital.

Naturally, everyone has his own method of doing things, but there are certain fundamental, economic factors which should be taken into consideration.

Fall Egg Prices Always High

One of these is the rise and fall of egg prices. Egg prices start their upward climb in July. By September they are high and the next three months are the most profitable months from the standpoint of cash income.

Therefore, we always hatch a part of our birds at Roselawn in February so that they will come into full production when egg prices are turning upward. This means July. Our March hatched pullets follow along about twenty days later.

By hatching early, we get the highest possible price for our market eggs from these pullets and it is during these months that feed cost is lowest, so our net profit is very high. This is just as true of customer flocks as it is in our own. Roselawn customers who have started with February and March chicks have made uniformly high profits.

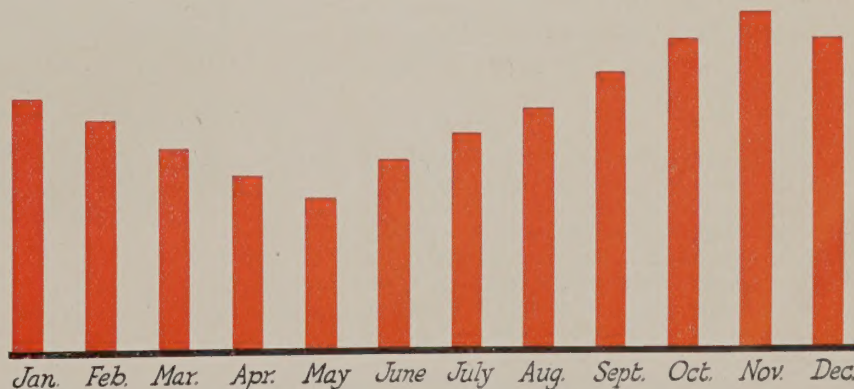

Our second reason for hatching early is to meet the high priced broiler market. The supply is low at this season

of the year so they are quickly sold to eager buyers. This reason alone should be worth the small additional effort which the early hatched chicks require.

May and June Chicks are Profitable

In May and June we hatch heavily for our late pullets which come into production in October. Egg prices are still high and profits good, but the primary reason for hatching late is to insure an even quantity of market eggs the year around.

This is important in the commercial egg business if you develop a quality market. Whether you cater to a private trade, a hotel trade or whether you sell through a reliable commission firm, they like to get a year round supply and they will pay a premium provided your eggs are full size, fresh and uniform in color.

It will be noted that egg prices are higher from July to January. This is the reason why it is so important to raise young stock from a big type, early-maturing strain. Roselawn breeders are selected for these characteristics.

We are continually importing and breeding for Better Birds

Roselawn English Leghorn Eggs Grade Highest and Bring Best Prices

The breeding hens in all our matings descend from birds of this type.

Great Advantage in Shipping

We advise that our customers do not hesitate in shipping their eggs. Too many people sell these fine choice eggs to the huckster or to their corner grocer and accept a price that is far less than can be secured by shipping. During this last October and November we were shipping our eggs to New York and receiving from 15c to 20c per dozen more for them than the local wholesale houses were paying at the same time of the year.

We Produce Better and Finer Eggs

The following letter from the largest quality egg buying firm in America speaks for itself.

MERSEL & FORTGANG

QUALITY EGGS

191 Duane Street, New York City

February 2, 1929.

Roselawn Poultry Farm,
Dayton, Ohio.

Gentlemen:

We wish to tell you once more that there is not a poultry man throughout the United States who is producing a better and finer egg than you. We have been handling your eggs for quite a number of years and never at any time did any of our trade complain as to size, color or quality.

If you will keep up your good work, there is no doubt that in the long run, you will greatly benefit by it.

Thanking you for all past and future courtesies,
we are

Yours very truly,

MERSEL & FORTGANG

(Signed) Alex Mersel

AM:LH

THE Roselawn English Leghorn hen lays eggs of extra large size with chalk white shells of good texture and when shipped to the New York market command the highest price. This is another great advantage in favor of this strain as eggs going to the eastern markets are closely graded upon arrival. The ordinary run of smaller sized eggs so prevalent with many of the smaller type Leghorns do not grade as high as the Roselawn Leghorn eggs and the shipper must therefore accept a less price.

This is also true in almost every egg market as buyers everywhere gladly pay top prices for this larger and better grade of eggs. In almost every city or town are many private families where choice eggs are always in demand.

It Pays to Grade Your Eggs

In preparing your eggs for the market it is always advisable to have them clean and well graded. Roselawn Leghorns very seldom become broody, therefore the eggs are clean and present a beautiful appearance.

Most of the hens' eggs will average 26 ozs. or more to the dozen. These quality eggs can be shipped or sold at better prices, and a handsome premium will be secured when they are properly graded.

We have certain days every week for making our shipments and for supplying our local trade.

All market eggs for New York are selected according to size and weight before they leave Roselawn. It pays us handsomely in increased premiums to cater to the exact wishes of the commission firm in this respect.

Start With Roselawn Big Type English Leghorns

The Future Is Bright for This Remarkable Money-Making Strain

THE main point to consider in profitable poultry is egg production. The sound truth in this statement is recognized by everyone who has made any real study of the situation.

The outstanding breed for egg production is the White Leghorns. But one must be sure to select a good strain. I have no use for the small underweight White Leghorns that lay small eggs. Far too many of them are bred for egg numbers regardless of size of egg or body weight.

Leghorns of the Roselawn English strain, on the other hand, lay big eggs and have big bodies, in addition to being heavy layers. These are the reasons for the tremendous popularity of this strain of English Leghorns in America.

Another characteristic has pointed the way for greater heights of leadership for the White Leghorn; that is, their ability to do well in large flocks. It is a great economy in housing costs to be able to keep a large number of layers together.

Roselawn English Leghorns Ideal for the General Farm

On many general farms the poultry has become one of the most profitable, if not the most profitable branch. And so I am not surprised to find that farmers and farm wives are gradually increasing the size of their flocks.

In increasing the size of his flock, one Roselawn customer soon found out that where all of his birds were kept together the Leghorns were the most profitable. So he gradually disposed of other breeds. This man writes that under the present arrangement his wife finds it easy to care for most of the daily routine work with a large flock of 1200 birds. Of course, the men folks do the heavier work during the entire year.

This statement is emphatically not an exception. Hundreds are doing the same thing.

A farm woman from Dyersburg, Tenn., who has kept accurate records, found that each increase in her flock has shown a corresponding profit. She started four years ago with 150 Roselawn Leghorn chicks and increased to 200 layers the second year. Last year she had 500 selected pullets and hens and a big new poultry house built with the egg profits.

Roselawn Leghorns Find Favor with the Back Lotter

Keeping a few layers in a confined area is a real hobby. But due to the confined space, birds of heavy breeds are apt to get too fat. This problem is overcome in the Roselawn Leghorns. Once they start laying, they lay so many large eggs which

A pure Barron male bird selected at random from one of our breeding pens.

requires so much feed and energy that they never put on that excess fat which reduces laying ability and is undesirable in any breed.

Roselawn Leghorns on the back lot are gentle and the young stock will hold its own with any breed for table purposes.

The back lotter also should consider that it is possible and practical to keep a larger number of Roselawn layers in the same space than any other heavy breed. Also, that they require less feed per dozen eggs.

Roselawn White Leghorns are Supreme On Commercial Egg Farms

Only the Leghorns are kept on commercial egg farms. It is a question only of which strain of Leghorns to keep. Here again we find the same preference for the Roselawn English strain.

A large number of commercial egg farms buy their baby chicks from Roselawn every year. These farms have kept accurate records on every item of expense and income. It is truly a great testimonial when they tell us that the Roselawn layers head the net profit list.

A more severe test of quality cannot be had. Commercial egg farms have learned that in vigor, egg size and egg numbers, the Roselawn Leghorns are most profitable.

Roselawn, itself, started as a commercial egg farm and we still ship larger numbers of eggs to New York every year. So we know what commercial egg farmers want.

Barron's Best Contest Winning Blood Comes to Roselawn

Every Bird Directly Related to Contest Winners

FOR our 1930 breeding season we have imported eleven outstanding male birds direct from Mr. Barron's big breeding farm, in England, and these birds will be used in heading our best pedigreed imported matings. When ordering these birds we specified that Mr. Barron select us birds directly related to some of his best contest winning pens and a close examination of the pedigrees below will show that every bird bears that relationship. It should be especially noted that several of these birds are sired by the same birds that sired his winners this year of several of the greatest egg laying contests in the world.

Barron Breaks All Records in 1929 Contests—Makes Clean Sweep in Britain Over All Competition

By winning the four largest egg laying contests in England, which ended in October, 1929, Tom Barron has just made a record that has never before been equalled by any breeder, and one that will no doubt stand for all time.

His pens of White Leghorns won in the British Contests as follows:

Harper-Adams Agricultural College Contest

Held at Newport, Salop, England
Won First position over whole contest and highest bird in the contest.

Yorkshire Federation Laying Contest

Held at Otley, Yorks, England
Won with Best pen in whole contest and highest individual bird in the contest.

Northern Laying Contest

Held at Burnley, Lancashire, Eng.
Won with Best White Leghorn Pen in whole contest

National Laying Contest (Daily Mail)

Held at Bentley, England
Winner with largest number first grade eggs in whole contest.

Mr. Barron's Letter

Catforth, England, August 23, 1929.

Mr. H. M. Tibbals,
Roselawn Poultry Farm,
Dayton, Ohio.
Dear Mr. Tibbals:

I have the pleasure of informing you that I am shipping you eleven White Leghorn Cockerels per S. S. "Adriatic."

I am especially marking one of these cockerels which I have chosen for you to mate to the Pennsylvania Contest Pen which you have purchased from me.

Please find the pedigrees herewith. I am certain you will be pleased with both type and general appearance, and especially so with the breeding of same. You will note that some of your cockerels are brothers to my best contest leaders this year, and others are closely related.

You are certainly getting something that will give you fine results and I wish you every luck.

Yours truly,

Tom Barron.

(NOTE) It should be borne in mind that foreign egg laying contests are for 48 weeks and the official egg records shown in the pedigrees are for 48 weeks only.

Still More Pedigrees of Imported Birds

Roselawn Has Been Importing Breeders Direct From Barron For Years

DURING the past ten years we have been continually importing high egg record pedigreed breeders direct from Mr. Barron and we always specify that he send us his very best contest winning blood. Space does not permit our showing all of the pedigrees of the birds we have imported but we are reproducing a few on this page. All of these high egg record imported birds are used in our matings to the very best of advantage the object being to infuse this new rich blood into our breeders. This stimulates heavy lay into our flocks and adds new vitality to our birds.

The pedigrees on this page cover some of our importations from Mr. Barron and are conclusive proof that we are continually improving our stock through these high egg record imported birds. You who buy eggs for hatching, baby chicks, or mature stock from us are assured that you are obtaining something that will give outstanding results as heavy layers.

Barron's Pennsylvania (1929) Contest Pen Purchased by Roselawn

Mr. Barron's pen of 10 hens entered in the Pennsylvania North American Egg Laying Contest 1928-29, is a wonderful pen from every standpoint. As soon as these birds arrived at the contest we started to check on them. As they continued with an exceptional lay of big white eggs, we decided that this pen would be a splendid addition to our matings and we purchased it.

Every bird of this remarkable Barron pen is now the property of Roselawn and is here on our farm. Mr. Barron sent us a high egg record male bird which he especially selected to be mated with these official high egg record hens. This is only additional evidence that we spare no expense in keeping our Roselawn strain a step ahead of all others in America.

Tom Barron's Good Name Much Abused

Mr. Barron is recognized as the world's greatest poultry breeder and his good name has been much used and much abused by many unreliable poultry keepers and hatcheries who claim to be selling pure bred stock and chicks of this great strain, when, as a matter of fact, they have never had a pure Barron bird on their place and have never imported a single bird direct from Mr. Barron.

Perfect Range, Methodical Care and Strict Sanitation

Growing birds have unlimited free range at Roselawn and develop into choice specimens. This view shows several thousand well matured pullets enjoying their evening meal.

ROSELAWN Poultry Farm is one of the pioneer commercial egg and breeding plants of southern Ohio, and is today one of the largest and best equipped establishments of its kind in the central part of the United States.

The plant was started by its present owners in a very modest way and has grown from year to year until now more than twenty-five modern buildings, scattered over the farm, are devoted entirely to our breeding and laying flocks.

Business Profitable From Start

The business has been profitable from the beginning. The first few years called for close figuring and careful management but there never was a year when the birds did not show a good, substantial working profit. They have always provided a good living for the owners and the plant has been built to its present capacity entirely through money earned by the birds.

Roselawn Poultry Farm stands as an example

to those who are skeptical as to whether or not there is money in the poultry business. It also demonstrates what can be done by father and son, planning and working together, giving their entire energy and attention to the breeding and improving of their stock.

Planning Ahead—Methodical Care

During our first few years we could not afford to take a chance so that everything—finances, rearing conditions, health—were all safeguarded. We planned ahead and put everything down on paper on a regular schedule. This method of operation is still employed at Roselawn. We will never be without it.

Strict Sanitation

All houses and equipment are thoroughly cleaned twice each year at Roselawn. We scrub them with lye water and spray the entire interior. In addition, roosts, nests and drinking fountains are sprayed once a week.

Perfect Range

From the very start we have plowed our ranges and planted growing crops once or twice a year according to the schedule arranged beforehand. The lots where breeders run are kept plowed and harrowed so that the soil is loose and porous.

The result of our care has been almost perfect health in our birds. We have never had a serious outbreak of any disease and I am firmly of the opinion that disease is absolutely preventable. With healthy stock at the start and with proper feeding, housing and sanitation there should be no trouble along this line on any poultry farm.

Our growing birds respond readily to these favorable surroundings, and the pullets come into profitable production at an early age. Those who buy pullets or mature stock from us are assured birds of strong vitality that have been produced under conditions that are almost ideal.

The Captain of the Police Force at Roselawn. A good dog is a fine thing to have on the poultry farm. With very little training he will soon guard your poultry with his life if necessary.

Your success is more certain with Roselawn Stock

Producers and Reproducers

Pullets Mature Into Prolific Layers

NOT only are Roselawn Leghorns great producers of big, chalk white eggs, but they make vigorous breeders and reproduce this ability in their offspring.

This is an important point because it requires sturdiness and long years of selection to firmly establish the egg producing characteristics in a strain. Moreover, the ability to reproduce, means that *a large percentage of the pullets will mature into profitable layers.*

We often hear of an individual high record hen which fails to throw a single high record daughter. Such a hen is worthless as a breeder. She is a producer, but not a reproducer.

Poultrymen Want High Flock Averages

Practical poultry men and women are not much concerned with a high record in one individual. They do want a large number of pullets that will give them good average egg production and reproduce that ability in their offspring.

The Roselawn English strain is noted for this practical characteristic and in dollars and cents it is the true measure of the worth of any breeding.

Roselawn Leghorns produce and reproduce faithfully. The new blood of high egg record contest winning stock imported direct from Mr. Barron is infused into Roselawn breeders as an assurance of continued high flock averages among our customers.

Vigorous males of high egg record imported blood lines are used as breeders.

Birds Mature Quickly

This strain of birds will mature more quickly than any other kind. The chicks start feathering immediately, and the little cockerels will start showing their red combs when about ten days of age. We have had them crowing in 26 days. They will reach broiler size weeks ahead of any other strain or breed, and with less feed.

Pullets often start laying before they are four months of age, and are in full lay when from five to six months old. They lay good sized eggs right from the start.

Birds of strong vitality are produced under these ideal conditions.

A sight worth coming many miles to see

Press Comment on Roselawn White Leghorns

Dayton Daily News

"Roselawn Poultry Farm is one of the cleanest and neatest places imaginable. There is no visible dirt, no foulness, no pollution. The fowls of all sizes are given the cleanest food in clean receptacles and running water is available at all times. The farm is a business success. How large it will become depends on how much its present owners want it to grow. It is in their hands. They have demonstrated that they can do as they like with it. Roselawn is a most interesting place and students of poultry husbandry may find there the finest opportunity for observing the practical working of a successfully operated plant."

Leghorn World

March, 1929

"As we have driven by Roselawn Farm several times each year and watched the development from a small beginning we were impressed more and more that here there was a master mind at the helm, guiding the affairs of this modern poultry farm. We know of no more ideal setting, a more beautiful location for a poultry farm than the location of Roselawn in the rolling semi-sandy country near Dayton, Ohio. Here among the giant old beech trees, in the fruit orchard and out over the fields roam and develop the White Leghorns for which Roselawn has become famous. It is a picture never to be forgotten."

"But pictures of any kind must be planned and 'premeditated,' using the word that Mr. Tibbals likes in referring to his success and that is exactly what made success possible, brought success to Mr. Tibbals. He painted a big picture in his mind's eye and then he painted it, brought it to pass in reality; if you live too far away to see this picture as I have seen it, then you will want to catch the inspiration of Mr. Tibbals' own picture in words, which we asked Mr. Tibbals some time ago to write for our family of readers."

—By H. V. Tormohlen, Editor."

"OK" Poultry Journal

January, 1929

"Forced by health to change occupations, Mr. Tibbals turned to his boyhood hobby. Now, ten years later, he and his son have the Roselawn Poultry Farm, one of the most successful commercial egg and breeding farms in the country, to show for their efforts. 'When you start with poultry,' says Mr. Tibbals, 'start with a good business bred strain. Always remember that it is the way the pullets perform at the nest that makes the difference between a highly profitable flock and an ordinary one.'—By C. G. Dalton, Editor"

Everybody's Poultry Magazine

March, 1929

"Roselawn Poultry Farm is as Mr. Tibbals' 'dream come true.' Beautiful, as the reader will determine from this illustration of part of Roselawn.—The Editor."

Poultry Tribune

November, 1929

"Eleven pedigreed cockerels from Tom Barron's best trap-nested S. C. White Leghorns have just been received at Roselawn Poultry Farm, Dayton, Ohio. This latest importation at Roselawn, as well as the addition of Barron's 1929 Pennsylvania Egg Contest Pen to the Roselawn matings is just an additional step in the fine progress made by this farm."

"When it comes to birds of Tom Barron strain, Roselawn has them. For ten years this firm has made a regular practice of importing direct from Barron, and every bird on the farm

Poultry Success

April, 1929

"With H. M. Tibbals and his son, W. J. Tibbals, owners and managers of the Roselawn Poultry Farm, Route 10, Dayton, Ohio, the main point is egg production and from reports received from customers the Roselawn Barron White Leghorns certainly pay big profits. I had the pleasure last month of visiting Roselawn, which is indeed a show place, with well kept houses, ideal surroundings and perfect range which insures good fertility and strong chicks. Mr. Tibbals and his son specialize in Barron White Leghorns, having made several importations of high priced stock direct from Tom Barron, in England.—By Campbell L. Cory, Editor."

American Poultry Journal

November, 1929

"Announcement has just been made that the Tom Barron pen at the Pennsylvania Egg Laying Contest has just been sold to Roselawn Poultry Farm, at Dayton, Ohio. Breeders have often asked us what English type White Leghorns are. The above cockerels with combs dubbed, imported by the Roselawn Farm in Ohio, will give you some idea of the English type. They are out of a strain of cock birds that produced winning teams in English egg laying contests.—Editor."

Hatchery Tribune

December, 1928

"The Tibbals' have two ways of keeping their customers sold. In the first place they make sure that their customers are satisfied. Every chick purchase must be satisfactory, besides a letter is sent to every customer periodically during the summer giving him information that will insure ultimate satisfaction when the pullets begin to lay.—By O. A. Hanke, Editor."

Standard Poultry Journal

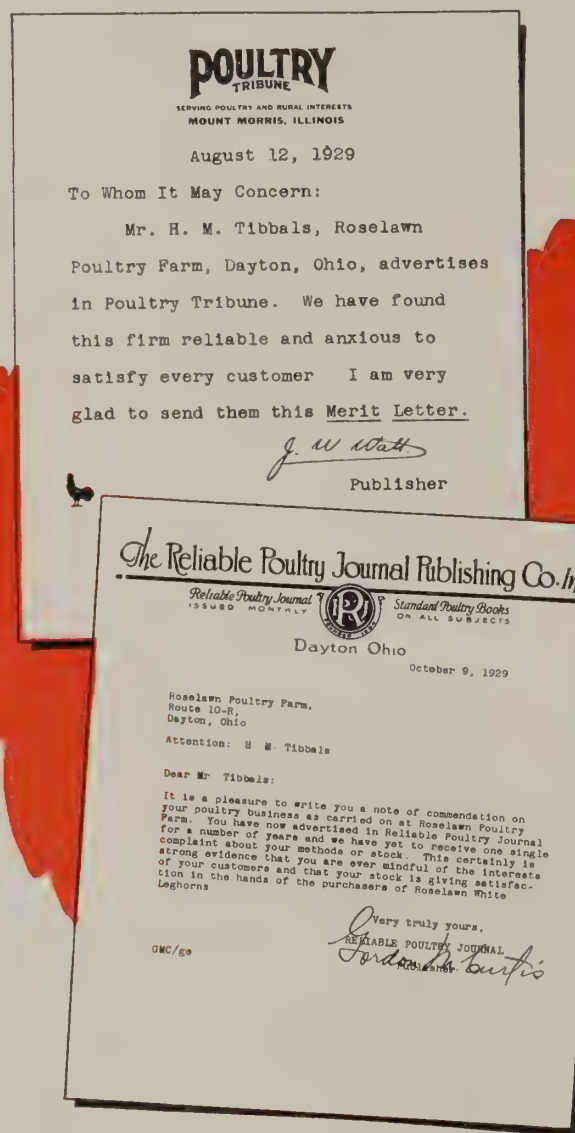

November, 1929

"Few breeders of pure Tom Barron Leghorns are better known in the United States than H. M. Tibbals of Roselawn Poultry Farm at Dayton, Ohio. He was one of the first breeders to recognize the fine production merits of this

world-wide strain and became one of the first exclusive breeders and importers of pure Tom Barron Stock in the country.

"A recent announcement showed this year's importations included Mr. Barron's Pennsylvania Egg Contest Pen of Official Record Birds and 10 cockerels personally selected by Mr. Barron from his best stock."

"We mention these outstanding importations to indicate a personal characteristic of Mr. Tibbals. All his life he has been direct and to the point. He makes up his mind carefully, but once the decision is made goes about it in a whole-hearted way.—Editor."

is either imported, or a direct descendant of imported Barron stock.

"Roselawn Poultry Farm is owned and operated by H. M. Tibbals and son, Wallace. Tibbals is one of the best business men in the poultry field and has his farm organized on a very efficient methodical basis. This fact, together with the farm policy of importing and breeding Tom Barron strain exclusively, has won for the Tibbals' the distinction of being one of the outstanding Tom Barron breeders of this country.—Editor."

Baby Chicks, Hatching Eggs or Breeding Stock?

A shipment of baby chicks at Roselawn. These chicks are big and fluffy. They actually weigh more than ordinary chicks because of our care in selecting big eggs for hatching.

Roselawn Hatching Eggs are carefully selected and prepared for shipment as shown above. We ship eggs from coast to coast and also to other countries. Nearly every customer gets a good hatch.

Our shipments of breeding stock go through in good shape. We allow plenty of room and attach feeding instructions together with plenty of feed. Mature Birds are shipped to any address in the United States and Canada and we Guarantee Safe Arrival. We also guarantee that the birds will prove satisfactory when they reach you.

WHICH do you prefer? Each method of starting with Roselawn Leghorns has its advantages. If you are starting in the spring of the year baby chicks really represent the most satisfactory method for the majority. No hatching worries or work. You receive them right from our incubator and you know they are hatched under the most scientific conditions, and vigorous. More people are starting with baby chicks than any other.

Nevertheless, we have a large number of patrons who buy hatching eggs and whether they live in Maine or Montana, they almost always get good hatches. We have had many reports of big early hatches from Canada and from every state in the Union.

One of the best seasons of the year to start with Roselawn Leghorns is the fall. Then of course, a mated pair or a trio or a pen is ideal. These foundation matings from Roselawn present a beautiful sight and each one is especially selected and mated to produce the best results. They will pay their way right from the start and before you know it you have a sizable flock, all direct descendants from this original mating.

Your Breeding Stock Selected for Headpoints and Type

We select young breeding stock first of all by headpoints. Long experience with this method of selection has made it surprisingly accurate in determining the majority of the best producers.

The Barron type is a real production type and we always pick the big lop comb, deep bodied birds for our matings. Those of you who buy pens, trios or pairs, will be well satisfied with our selection for you. Your complete satisfaction is guaranteed!

Male Birds

The male bird is half the flock and one of the best ways of improving egg production and size in your present flock is to use Roselawn males. These vigorous fellows have the dominant breeding to stamp the production characteristic in their offspring. Their value in this capacity can hardly be over-estimated. The small cost of a Roselawn male bird for this purpose should not be figured as an expense. It should be figured as an investment which will pay for itself many times over in increased egg production from the pullets you raise.

Growing chicks at Roselawn ranging over a field where sprouted oats are just coming up.

Just plain cute beyond compare! Who could resist admiring these healthy, full of life chicks. We always look forward to hatching season at Roselawn.

Sturdy Baby Chicks From Big Carefully Selected Eggs

sent out, and barring an occasional accident in transit, they will reach you in perfect condition.

Roselawn Chicks Are Strong

Close attention to all the details from selecting the eggs to the operation of the incubation is responsible for the high quality in Roselawn baby chicks. And back of these precautions is the element of sturdiness.

Roselawn chicks are strong because they come from vigorous, healthy parents kept under ideal conditions in open air houses. Not only are the parents healthy, but they have always been healthy from the time they were hatched. This takes close attention and it pays in better chicks for ourselves and our customers.

BABY chicks are by far the most popular with Roselawn customers. Every year we sell all we can spare. Hatching Roselawn baby chicks takes a great deal of close, personal attention to detail. Our steadfast insistence on highest quality is the reason why Roselawn customers succeed so well with our chicks.

Eggs Are Selected With Care

Eggs for setting are carefully selected for our incubators. Only large, chalk white eggs, weighing 24 to 28 ounces, are used. Each one must be of good shell texture, well shaped and fresh from the nest.

The incubators are of the most modern type. Ventilation, temperature and moisture are scientifically tested and regulated. Sanitation is strict. As a result of these precautions, we know that we can hatch chicks just as well as the old hen. In fact, we think better, and we have quite a bit of evidence to prove it.

The point we are trying to bring out is that when you buy Roselawn chicks, no matter what price you pay, you are buying the highest quality we can produce.

As soon as the hatch is completed, we personally handle each chick inspecting its fluffiness, its head, its feet and its weight. Only perfect chicks are

Feeding Instructions With Each Order

We send complete feeding and housing instructions with each order. Our interest does not stop the minute the chicks are shipped. We are just as much interested in helping you to raise them so they will grow up to be profitable producers and pay you back many times the money you have invested in them.

Order Your Chicks Early

The demand for our chicks is very heavy, therefore it will be to your advantage to place your order as far in advance as possible to insure your getting them just when wanted.

Orders will be filled in the rotation in which received. In case we should be sold out on the date your order calls for delivery we will immediately notify you advising date the order can be filled. Should this date not be satisfactory to you your advance payment will be returned immediately.

We Prepay Postage

We prepay all postage on chicks sent by parcel post, and guarantee safe arrival and full count. In fact, we pay extra postage on each box of chicks to insure careful handling while enroute. If, for any reason, a loss should occur in shipping, over and above the number of extra chicks included, the buyer should advise us immediately and we will make good by supplying additional chicks at no expense, or we will refund for the amount lost.

High Quality in Baby Chicks

Prices Established on an Accurate Basis

ROSELAWN baby chicks right straight through are genuine, honest quality, and I do not think you can find better ones any where in America.

Our prices are established on an accurate, scientific basis which takes into consideration the following facts:

- ① Cost of production.
- ② Number of years of pedigreeing in the ancestry of each bird in the mating.
- ③ The egg records of the females.
- ④ The number of generations of known high record ancestry.
- ⑤ Their worth in the customers' hands.

It Pays to Buy Good Chicks

It has always been my advice to customers to buy the very best they can afford because a few more eggs from the pullets more than makes up for a few cents additional in the chicks.

Also most of you will do some breeding from your birds and in that case the original cost of the best chicks is a wise investment.

On the other hand, bear in mind that we have no cheap quality chicks at Roselawn. If you do not care to pay for the best quality and still want a flock of high producers you will get it from our

Here is a shipment of chicks from our best matings. The ideal foundation for success as a breeder.

lowest priced chicks. Many people have started with these chicks and then purchased the higher priced chicks later with the profits.

No matter which quality you buy your order should include a few chicks from our best matings in order to obtain some of our very best cockerels to head your breeders.

Chicks Shipped Prepaid By Parcel Post

Our chicks are shipped by parcel post to any address east of the Rockies. They are carefully packed in well ventilated boxes and we guarantee that they will reach their destination in excellent condition. They are carefully selected before shipment and a number of extra chicks are included with each order to insure the buyer getting the full number of big husky chicks.

Because of the great care given our breeding flocks we produce chicks that live and grow. It is nothing unusual for those who have had our chicks to advise us that they successfully raised 90 percent to 98 percent to maturity.

Chicks are shipped by parcel post immediately when taken from the incubator, and will arrive at destination in excellent condition. We always guarantee 100% safe arrival of good, strong, livable chicks.

The layer and the chick. It's hard to realize when the Roselawn Chick is hatched that in 18 to 20 short weeks, it will be laying and returning a profit just like its mother.

When you start, start right—get good chicks

Eggs For Hatching

Shipped Fresh From the Nests

WE specialize in Eggs for Hatching and can furnish them in most any quantity, and can ship to any address in the United States and Canada. We guarantee 90% fertility. Those giving us their orders for eggs for hatching can do so with the assurance that they will receive good hatchable eggs, fresh from the nests. The eggs are carefully selected for size, color, and shell texture, then well packed in such a way that they are guaranteed to reach you without chilling or jarring.

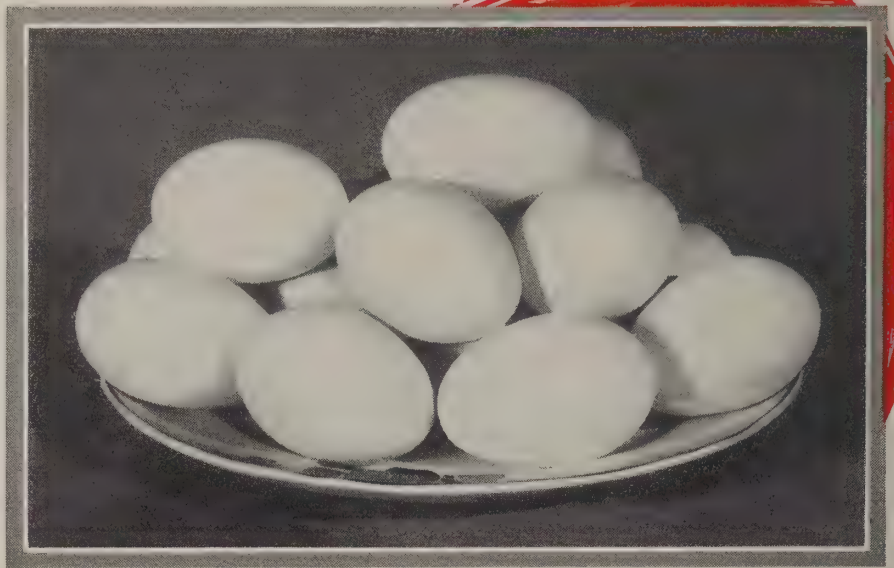

The eggs are extra large and pure white and will hatch into extra large full-of-pep chicks that will live and grow.

Buyers should test their eggs between the 7th and 10th day of incubation and the clear eggs, if any, must be returned to us prepaid for replacement.

Eggs for hatching are usually shipped by express unless we are instructed differently. Your order should be placed as far in advance as possible and we will make shipment on exact date you specify.

Cock Birds and Cockerels at Low Cost

Every year it has been necessary for us to disappoint many who want male birds from us. Many people seem to have the habit of waiting to supply this most important member of their breeding flock until the very last moment. It is far better to acquire your male birds during the summer or early fall when you have the decided advantage of far lower prices and the greater number of birds from which your selection can be made.

Eggs for hatching are carefully selected and shipped fresh from the nests. Fertility is guaranteed and a good hatch of strong chicks can be expected.

Immediately after the breeding season each year, about June 1, we offer our yearling breeding males for sale at extremely low prices. After May 1, each year we offer February and March hatched cockerels at very low cost. They are carefully selected from among thousands and can be secured during the summer months at about one-fourth what these same birds will sell for during the late fall and winter.

They never last long at the prices we ask, consequently those desiring to infuse new high egg record blood and grade up their flocks should place their orders early. You will be agreeably surprised at the results obtained by the use of these highly bred males in your next season's breeding pens. If you wish to revitalize your stock—if you want to increase its laying efficiency—these male birds will add a permanent value to every bird you raise.

Cockerels or cock birds can be safely shipped to any address in the U. S. We use plenty of light weight coops in making shipments so that the birds will not be crowded. Feed and water is supplied for the trip and the birds are guaranteed to reach you in perfect condition, and to prove satisfactory upon arrival.

For this coming season we will have breeding cockerels for sale directly out of the high egg record birds we have imported from Barron. These imported birds are brothers to Barron's contest winners. Therefore, those securing these cockerels from us for breeding purposes will be getting something of an outstanding nature that will do much in the improvement of their flocks.

Some early hatched Tom Barron cockerels ready for shipment at Roselawn

Pullets and Foundation Breeding Pens

A Roselawn Breeding Pen like this will produce a nice sized flock of heavy laying Pullets in a single season.

Pullets

AT Roselawn we are especially well equipped for the raising of a large number of pullets, and the supplying of these pure English bred-to-lay birds to poultry keepers in different parts of the United States and Canada is a feature with us.

Our growing pullets are given everything that nature intended, and then some. We provide colony houses of the latest type, properly ventilated, and these are moved to new ground every year to insure clean, fresh range. The birds have access to growing crops of clover, oats, alfalfa, etc., planted for their especial benefit. Large trees and orchards provide shade in abundance, and flowing streams of spring water are close at hand.

Starting about May 1st, every year, we can supply pullets at from 10 to 12 weeks of age, and later in the season we have them 16 weeks old, and ready to lay. Every shipment is made with our positive guarantee that the birds will reach you safely and prove satisfactory upon arrival.

Write for prices and have us book your order early, as the demand always exceeds our supply.

Foundation Breeding Pens

ONE of the finest and most economical ways of starting in the poultry business is to obtain a mated Foundation Pen of the very best Roselawn stock. Set every egg and in the Fall you will have a high quality flock equal in every respect to our own here at Roselawn.

Don't overlook this economical way of obtaining some fine breeders. If you now have a flock, a foundation pen will supply you with plenty of males, and add the new blood so necessary in the improvement of the egg laying proclivities of your birds.

We supply these Special Mated Pens from June 1st to December 1st, and ship promptly when wanted. We do not ship them in the Winter and early Spring months, as there is danger of the birds suffering from cold while enroute. We mate them up with two, five, ten or fifteen choice yearling hens or early hatched ready-to-lay pullets from our best matings, and head each pen with an early hatched cockerel out of our imported matings.

They can be shipped any distance, and will arrive in perfect condition. Prices are reasonable, and the quality of the stock is guaranteed.

Our Breeders are given out doors range, fertility of eggs assured

All Correspondence and Shipments Are Attended to Promptly and Personally at Roselawn

I set aside certain hours of every working day to answer correspondence and attend to shipments. When you write to Roselawn you are writing to me personally and I answer your letter personally.

When you write a letter to Roselawn you can depend upon it that I answer it personally and promptly. When you receive a shipment from Roselawn you may know that it has received Wallace's or my best personal attention.

We will never intrust this part of our work to anyone else, because we want to be sure that you will be entirely satisfied. For that reason too we always try to send you more than your money's worth.

We Keep Careful Records of Every Purchase

We keep careful breeding records of our Barron Leghorns and also of every purchase. You may order from us year after year and before each order is filled we turn to our records and find out just which blood you received from Roselawn before. Knowing this information, we can then send you new blood that will mate nicely with what you already have.

This intelligent service is very much to your advantage because it is really intelligent mating service—far better than buying blood “hit and miss” from different breeders each year.

Advisory Service

In conducting our affairs at Roselawn we have naturally gained a great deal of valuable experience through the years. We always appreciate an opportunity to pass this experience along in order to help our customers. So don't hesitate to write us at any time, if we can be of help.

IN OUR management at Roselawn one of the important details is personal attention to all correspondence and all shipments.

So that there will be no disappointment to any of our customers, I have set aside certain hours of every day when I do nothing but attend to this part of our business.

Service Bulletin Free to Customers

“Roselawn Poultry Farm News” Will Help You to Success

WHILE we have hundreds of customer-visitors each year, naturally we know that the majority of our customers cannot find the time to visit us because of time and distance.

Many of these friends write us each year for information on many questions pertaining to our methods of handling young stock, feeding, breeding, etc. We are always glad to answer these questions carefully.

Many more of our friends intend to write but delay it for lack of time as I found out on various

trips I have made around the country for the express purpose of calling on Roselawn customers.

For these reasons we started the publication of the “Roselawn Poultry Farm News” written and published in the interest of Roselawn customers. The News is free and you receive it automatically as soon as you become a Roselawn customer.

This is only one more instance of the personal touch we try to maintain here at Roselawn and our interest in the success of everyone who buys our stock.

Dayton In the Center of Everything

37 Daily Mail Trains Insure Quick Dispatch

Roselawn Chicks can be safely shipped within a radius of from 60 to 72 Hours from Dayton.

One Hundred Percent Safe Arrival GUARANTEED

DAYTON is ideally located as a shipping point as it is practically in the very center of the entire United States, east of the Rockies, and shipments can be made in all directions with great dispatch.

THIRTY-SEVEN MAIL TRAINS carrying parcels post mail leave Dayton every day, ten going east, ten north, nine south and eight west. This gives us a great advantage over small town breeders with one or two mails daily and is an

assurance that there is no delay in the delivery of our chicks. Many of these are fast through mail trains and on our long distance shipments we always arrange to catch these fast trains.

Chicks need not be fed for from 60 to 72 hours after leaving the incubator, therefore we can ship to any point in the U. S., east of the Rockies, and to all Eastern Canada, and guarantee them to reach you 100% alive and in perfect condition.

All shipments are made promptly, on exact date promised

Here's How We Ship Your Chicks

THE utmost precaution is used at Roselawn in shipping baby chicks. Our incubator building, pictured below, has a heated garage in connection which enables us to load our delivery truck without exposing the chicks to the elements. As the chicks are taken from the incubators, the boxes are weighed and stamped, placed in a heated truck and rushed to the train, thereby eliminating all chance of the chicks becoming chilled.

Baby chick buyers should also use precaution and make doubly sure that their chicks get from their postoffice to their brooders without becoming chilled. See that your postmaster is advised that you are expecting a parcels post package of baby chicks and have him notify you as soon as they arrive. When you receive notice that the parcel has been received, do not wait for the postman to make delivery but call for the chicks personally.

Incubator Building—Roselawn Poultry Farm.

OUR Incubator Building is one of the most modern type, being constructed entirely of granite-faced cement blocks. It is properly ventilated for best results, and the chicks we produce here are unsurpassed anywhere for real quality.

In the picture to the right, note Fritz and Bozo, our two champion German police dogs. These dogs have been especially trained in their duties as our night watchmen. Visitors to our farm, day or night, are requested not to alight from their cars until after we have first spoken to the dogs.

Roselawn Invites You

ITS VERY appearance is an invitation to stop and visit. Wide, spacious blue grass lawns and clover fields, a sparkling spring creek, well kept fruit trees and gently-rolling hills.

We who make Roselawn our house are proud of this dream spot. Proud to show the result of our years of enjoyable work. Proud to make you welcome. All of it has been made possible by our ever busy English White Leghorns.

And how well they fit into this scene which they have really made for themselves! With their beautiful snow-white plumage and their bright red lop combs, they make a beautiful picture as they roam over the fields and through the trees.

The object of this catalog is to give our patrons and friends who live at a distance a true understanding as to the breeding of our stock as well as our methods of housing and caring for our birds. We have made liberal use of pictures that portray things just as they are here. These pictures were taken right here on the farm, most of them being our own snapshot views of the birds and buildings, and are reproduced without retouching. The pictures of the individual birds are true reproductions of birds picked at random from our own flocks and are not an artist's conception of how they should look.

We invite you to visit our farm and see our wonderful breeding stock. Many of you live at a great distance and we realize that it will be almost impossible for you to come but we want you to feel confident in ordering by mail, that you will be given a square deal, the same as if you were right here with us to make your own selection.

We are sure our Roselawn strain of White Leghorns will prove profitable for you and we earnestly hope you will try our stock. You will be more secure with this great world famous strain of heavy layers, and your success more certain, than with any other strain of birds.

You'll enjoy every minute of your visit to Roselawn and we enjoy your company. If you pass through Dayton by automobile you will find Route Number 51 well paved, and a main highway. Our farm is 6 miles from town on this route.

Yours for better poultry—more eggs—greater profits.

Roselawn Poultry Farm

H. M. Tibbals & Son, Owners and Managers

R. F. D. No. 10, Dayton, Ohio

Her Roselawn Leghorns More Reliable Than Cotton

**Tennessee Farm Woman Started With Less Than \$100 Four Years Ago —
Made \$1591.43 Net Profit Last Year**

Dyersburg, Tennessee, November 1, 1929.

Roselawn Poultry Farm,
Dayton, Ohio.
Dear Mr. Tibbals:

We are just entering our fifth year with your pure Barron Leghorns, and each season we like them better. We started four years ago with only 150 of your chicks and a total investment of less than a hundred dollars for equipment, counting everything. Today we have a fine flock of six hundred (600) birds, two good poultry houses, brooding equipment, incubators, etc., the birds paying for it all. I wish more farm people knew the advantage of keeping a flock of good hens instead of the poorly bred or mixed up flocks so often found on the farm. Our flock of Roselawn Leghorns is ideal. They are real hustlers, quick maturing, year around layers of large white eggs, and the most delicious table fowl. We have learned the early hatches are most profitable, and plan to start our chicks early in the season. *We formerly depended upon cotton largely as a cash income, and I recall many years that "cash failed to come in."* Since we have added "Roselawn" Leghorns as a side line along with other crops we are faster on the road to home ownership. The following figures show our profit from our farm flock, 1928-1929:

Number hens.....	500
Number eggs laid.....	89,090
Average production per hen.....	178 eggs
Value of all eggs sold and eaten.....	\$2,407.09
Value of all fowls sold and eaten.....	384.34
Total Income.....	\$2,791.43
Total Expenses.....	1,200.00
Net Profit.....	\$1,591.43

We value stock on hand, buildings and equipment at \$1,400.00.

Yours very truly,

MRS. T. O. HARRISON

Remember you are always welcome to visit our farm

Enthusiastic Customers Everywhere Praise Roselawn Stock

WE receive hundreds of very interesting letters of appreciation from our customers in all parts of the country telling of their success and complimenting us on the quality of our chicks, eggs for hatching, and mature stock. We also receive many very fine photos and snaps shots of their growing flocks. We wish we could reproduce them all but space will not permit. The following are a few of the many taken from our letter files:

Mrs. Ralph Hoppes, of Portland, Ind., makes \$1134.00 her first year with 300 Roselawn hens.

My 300 Roselawn Hens Laid 60,244 Eggs in Year

Portland, Indiana, November 18, 1929.

Roselawn Poultry Farm,
Dear Mr. Tibbals:

Our 300 Roselawn hens which we raised from the baby chicks purchased from you in the spring of 1928, laid just 60,244 eggs during their first year. Therefore, we had a flock average of over 200 eggs for each hen. Our sales of eggs and fries amounted to over \$1700.00 and our expenses were \$566.00, so our net profit was \$1134.00 for the year from our 300 birds, and we still have the hens.

Last spring we purchased 1000 more Roselawn chicks and we have 392 fine pullets that are laying from 17 to 18 dozen eggs per day now. This flock is the wonder of the community judging by the inquiries and visitors we have. What I particularly like about Roselawn Leghorns is their size, as my hens average well over 4 pounds and the eggs are big and average better than 26 ounces to the dozen.

This is my first experience in keeping a large flock and I am more than pleased.

Sincerely,

MRS. RALPH HOPPES

Pullets Weigh 4¼ and 4½ Lbs. Lay Big Eggs

Grand Bay, Alabama, October 10, 1929.

Roselawn Poultry Farm,
Dayton, Ohio.

Dear Mr. Tibbals:

I want to commend you upon the excellent enterprise embodied in "Roselawn Poultry Farm News."

I have secured more practical and profitable knowledge about pullets and the chicken business generally from this first issue, than I have been able to secure from plodding through numbers of regular poultry journals.

Why should you not tell the members of your Roselawn family the names of the best

appliances and supplies that you have proven in your own operations? I can follow your directions with absolute confidence and I only regret that you do not print the "News" monthly instead of quarterly, as announced.

In this connection I want to tell you that I have the finest lot of pullets in Alabama. They were developed from Roselawn "AA" chicks and I actually had to put them on retarding mash for six weeks before I wanted them to begin the winter laying. Many of them weigh 4¼ and 4½ pounds and they are laying more eggs than any other flock in this section—nice, big eggs, too.

Yours very truly,

N. E. THATCHER.

Flock Averaged 230 Eggs in Year

S. Glenn Falls, N. Y., October 26, 1929.

Mr. H. M. Tibbals,

Dear Sir:

The laying year of my hens came to a close today. They were out of the 25 chicks I bought of you in the spring of 1928 and I have trapped them every day. My eleven hens laid just 2532 eggs during the year, an average of 230 eggs each for the flock. My best hen laid 273 eggs for the year and the lowest 194 eggs. Not bad I figure when you can get ten well over two hundred eggers out of eleven raised. Out of the other strain that were in the same flock and received the same care as my Roselawn hens there were only four out of seventeen that laid over two hundred eggs. I remain,

Yours very truly,

HARRY T. WILLETT.

Pullets "Hitting" 80% and 100%

Downey, Calif., November 1, 1929

Roselawn Poultry Farm,

Dear Mr. Tibbals:

The shipment of breeding hens and cockerels reached me in splendid condition, there was hardly a feather ruffled on the birds and they "opened up" to my entire satisfaction. The hens are already in production. The pullets you shipped me insist on hitting an 80% production, and some days as high as 100%. If you have any prospective customers in this section I will be glad to show them your birds and their egg records.

Yours very truly,

R. SHINGLER.

A Fine Lot of Cockerels

Kimball, Minn., August 13, 1929.

Roselawn Poultry Farm,

Dear Sirs:

Received the cockerels in first class condition and they sure are a fine lot. Many thanks for your kindness for selecting those birds for me.

Yours truly,

JOHN A. BESONEN.

"Glad to Be in Texas"

Tavener, Texas, June 6, 1929.

Roselawn Poultry Farm,

Dear Sirs:

I received the 500 chicks in fine condition. When I took them out of the boxes they ran around the brooder house and flopped their wings. My little boy said "It's cause they are so glad to be in Texas."

A Satisfied Customer,

MRS. E. S. BULS.

1500 June Chicks Doing Fine

Eckley, Colorado, September 13, 1929

Roselawn Poultry Farm,

Gentlemen:

The 1500 chicks you shipped me last June arrived in excellent shape and are doing fine. Let me know your price on 500 more chicks from your "AA" matings for delivery April 1st.

Yours very truly, R. B. COX.

Customers Are Proud of Their Roselawn English Leghorns

The "Jaspers" Would Live

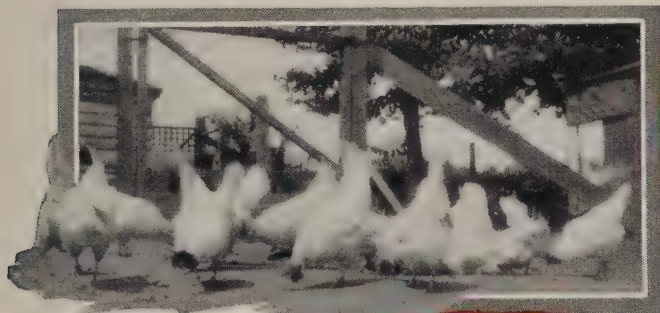

Clarksburg, W. Va., August 24, 1929.

Roselawn Poultry Farm,
Gentlemen:

Just a word about my 200 Foundation "AA" Chicks which I received from you March 19th. I work in the mines and work is scarce—2 and 3 days a week—and just before I ordered the chicks the mines were down for 8 months. \$54 looked like all the money in the world to me. I thought I was taking a chance, but I wasn't—cause those "Jaspers" would live in spite of anything. My brooder house was about ready to fall down—full of cracks that I stopped up with newspapers. I had a home made brooder, an old gas stove with a piece of galvanized tin that I used as a hover, and my losses were just 9%. I had peat on the floor and I fed and am feeding Purina chows as per their instructions. Now the results are as follows—not so bad considering the tools I had to work with: Not a case of diarrhea or any other of the chick maladies. The healthiest bunch of chicks I ever saw. The little devils were roosting when 4 weeks old and I took the heat away from them at 5 weeks. My first little rooster crowed in 32 days and my first pullet layed in 4 months and 6 days. I have as fine a bunch of pullets as one could wish for.

Yours truly,

JOHN HRABE.
(Box 952.)

Mr. W. B. Carr, a business man of Greensboro, N. C., secured wonderful results from his 22 Roselawn pullets.

Flock Averages 215 Eggs With Another Month To Go

Greensboro, N. C., Nov. 2, 1929.

Roselawn Poultry Farm,
Dayton, Ohio.
Dear Sirs:

The pullets we raised from the chicks which we purchased from you in 1928 for experimental purposes have made excellent records and equal most trap-nest stock that I have paid as high as \$1.00 each for hatching eggs. The average of 22 pullets in my experimental flock laid a total of 4,735 eggs up to November 1st and many will not complete their laying year until late in November. This gives me a flock average of 215 eggs per bird to date, with almost another month's laying to be added to complete the year.

Out of my 22 Roselawn birds I have five hens with records of from 250 to 293 eggs, six hens from 225 to 240 eggs and seven from 209 to 225 eggs. Only had one poor layer in the lot.

Another very pleasing experience with your stock, when properly raised, using the necessary sanitary precaution, there seems to be no trace of disease.

It is always a pleasure to me to boost any business connection that I have with a concern that proves to be absolutely reliable, and especially in the poultry game.

Very truly yours,

W. B. CARR.

Mr. and Mrs. Thos. H. Wilson, Concordia, Kans., receive more than market prices on account of quality of eggs.

Pullets Cost Us 27c Each

Concordia, Kansas, October 24, 1929.

Roselawn Poultry Farm,
Dayton, Ohio.
Dear Sirs:

Your last issue of Poultry Farm News was surely fine; just full of good things. The baby chicks we bought from you last Spring have developed into a beautiful flock of pullets, and we are very proud of them. Folks admire them so much and always ask—"Where did you get them?" We have 360 fine birds, and they are already laying 40%, and are coming up each day. I did as you said, and fed them in such a way that they have shown fine body growth, and the eggs are large. We are receiving a premium above regular prices on account of their uniformity and quality. We are convinced that it pays to buy baby chicks from such stock as you have. I keep account of the cost of brooding and raising my chicks, and after selling my cockerels and a few pullets I find the 360 pullets we now have cost us exactly 27c each. A field representative from the Poultry Research Society paid us a visit and was very enthusiastic over our flock. He said our hens would make such fine breeders. We surely want to thank you for your past courtesies and fair treatment, and gladly recommend your stock. We are very busy with our farm work, but have found since we started with your Tom Barron strain of Leghorns that they can be depended upon as a reliable income in our farm work. With best wishes, we are

Yours truly,

MR. AND MRS. THOS. H. WILSON.

Hatched 566 Lively Chicks

Roselawn Poultry Farm,
Dear Sirs:

Roscoe, Ohio, October 31, 1929.

Just a line to let you know the results I got from your eggs last year. Of the eight hundred eggs I bought of you, from your best "AA" matings, I hatched five hundred and sixty-six nice, lively chicks. From these chicks I have a fine bunch of pullets in egg production now. Please send me your new catalog.

Thanking you, I remain,

KENNETH DICKERSON.

Never Had a Sick Chick

H. M. Tibbals & Son,
Gentlemen:

Macon, Georgia, October 21, 1929.

We shall look forward with much interest for the Roselawn Poultry Farm News. It is full of the best help that can be had in the poultry business.

Your baby chicks that we bought in May commenced to lay the day they were five months old, and one cockerel crowed when four weeks old, lacking one day. We never had a sick chick and I am proud of my beautiful Roselawn Tom Barron Leghorns. Have disposed of every chicken on our place and have yours only. Thanking you, I am,

Yours truly

H. M. FLEETWOOD.

Wonderful Success is Enjoyed By Roselawn Patrons Everywhere

Mrs. M. E. Lewis, Mendon, Ohio, says, "My pullets look just like the picture you have in your advertisement."

Am Pleased With My Flock

Roselawn Poultry Farm,
Dayton, Ohio.
Dear Sir:

Mendon, Ohio, September 7, 1929.

I feel as though I want you to know what a wonderful success I had with the 500 chicks I bought of you March 27, 1929. I raised 238 cockerels, 250 pullets. We have these pullets in laying house now, and are getting from 90 to 100 eggs a day. Got our first egg July 24th. Almost all of them look like the picture you have in your advertisement in *Poultry Tribune*. I also have some very nice cockerels from the 50 AA matings I bought of you in April. I am very much pleased with my flock and will be a booster for Roselawn chicks. Again thanking you for past favors and wishing you success, I remain

MRS. M. E. LEWIS.

A Nice Looking Lot of Pullets

Wheaton, Illinois, July 18, 1929.
Mr. H. M. Tibbals & Son,
Dear Sirs:

The pullets arrived Wednesday and they are a nice looking lot of pullets. I am perfectly satisfied with the birds and hope they will prove to be as good layers as they are in looks.

Yours truly,

M. B. FOLEY.

I Can't Believe They Are But 10 Weeks Old

Owatonna, Minn., July 19, 1929.
Roselawn Poultry Farm,
Gentlemen:

Cockerels arrived in good condition and I am well pleased. I can hardly believe they are only 10 weeks old and I wish you would send me your system of feeding as I am anxious to keep them growing like they have been.

Yours truly,

LOUIS NIELSEN.

Have Given Remarkable Results

Plant City, Florida, November 12, 1929.
Roselawn Poultry Farm,
Gentlemen:

Last March you forwarded me 300 baby chicks from your "AA" matings and these birds to date have given remarkable results. We will want more chicks in March so please send your new price list.

Yours very truly,

W. A. MOSER.

February Chicks Doing Fine

Alexander, Kentucky, February 20, 1929.
Roselawn Poultry Farm,
Gentlemen:

Received my 1400 White Leghorn chicks from you on February 19 in good condition and they are doing fine. I am well pleased.

Yours very truly,

ADRIAN NORDWICK.

Pullets Received—Am Well Pleased

Miami, Florida, July 21, 1929.
The Roselawn Poultry Farm,
Dear Mr. Tibbals:

Just a few lines to let you know that the pullets came through in good condition and I am well pleased with them. I thank you for past favors and assure you of more orders in the future. Yours very truly,

CECIL R. MATHERS,
1044 N. W. 27th Street.

Special Breeding Pen—Very Fine

Bethesda, Md., July 22, 1929.
Mr. H. M. Tibbals,
Dear Sir:
The breeding pen arrived and they are very fine. I thank you. Yours truly,
MRS. GEO. E. HAMILTON.

Glad to Get the Cockerels

Morgantown, Ind., July 18, 1929.
Roselawn Poultry Farm,
Dear Sirs:
The breeding cockerels arrived yesterday morning on the 8:30 train and were in good condition. Was very glad to get them for which I thank you and wish you success in your business. Yours respectfully,
DORA FROWNFELTER.

Lively Chicks Raised 92%

Windsor, Conn., October 23, 1929.
Roselawn Poultry Farm,
Dayton, Ohio.
Dear Sirs:

Received my Roselawn Poultry Farm News and read it with great interest. It shows that you are looking out for the interests of the people who are trying to make a success of raising your fine breed of birds. Sorry I neglected writing you sooner about the chicks I purchased from you last spring, but I want to say right here that I am more than a satisfied customer. It was a long trip for them to make, but the next day, after a good night's sleep, I never saw such a lively bunch of chicks and I raised ninety-two percent of them. They are now five months old, and I am getting better than fifty percent production.

It seems good to find someone you can place confidence in that does more than they advertise. Don't be surprised if you get a lot more business from this section, as I have more than praised your stock. Yours truly,

EDW. ZEPPESEN.

Cockerels Worth \$25.00 Each

Pittsville, Md., October 3, 1929.
H. M. Tibbals & Son,
Dear Sirs:

I have about sixty pullets out of the chicks I received from your hatch of June 12th. I have two cockerels out of the same lot that I would not take \$25.00 for. At nine weeks some of the cockerels weighed three pounds. I have noticed that my pullets are as large as most of those in the community hatched two months earlier. I am well pleased with the quality of your stock.

Yours very truly,

DISSTON A. STOCKLEY

You Too, Can Succeed With Roselawn Stock ---The First Year

Raised Every Chick

St. Petersburg, Fla., October 21, 1929.

Roselawn Poultry Farm,
Dear Sirs:

I am in receipt of your Roselawn Poultry Farm News and I have read each and every word with great interest and I am looking forward for the next issue. This bulletin will be appreciated by all of your customers and will be a great help to them.

I have already adopted your suggestions on extra care of housing pullets, described in your article.

I raised every chick you shipped me, and the pullets sure are a fine looking bunch, with big lop combs, and are laying lots of big eggs. We are getting seventy-five cents per dozen for eggs at the door. Sold four of the cockerels at \$5.00 each.

We plan on building up a flock of five thousand Tom Barron Leg horns from your farm.

Wishing you continued success, I am,

Yours very truly,

ERNEST E. MORGAN.

Mr. W. R. Mains, Augusta, Ky., placed his June hatched chicks in a shady spot and had fine success.

June Chicks Did Well

Augusta, Kentucky, July 30, 1929.

Roselawn Poultry Farm,
Dayton, Ohio.
Dear Sir:

On June 24th you shipped us three hundred Tom Barron S. C. White Leghorn baby chicks from your best "AA" matings. They arrived on June 26th, as fine a bunch of baby chicks as I ever saw, 312 actual count, and not one weak one in the bunch. We had our Buckeye brooder stove going, heat about 90 degrees. My neighbor thought I was crazy, having a stove going in such hot weather, but I told him never mind, just watch those baby chicks. We gave them a drink and turned them loose under the brooder and they were at home. Today we have 303 and they are the size of a good sized partridge. You just ought to see those chicks. I had them under the trees on the ground when they were ten days old. We have visitors almost every day at our plant, and they all marvel at the size of these chicks when we tell them they are only a little over four weeks old, but there is no secret to it. Just three things—first good stock, then a good, comfortable, clean place, and good feed.

Yours very truly,

W. R. MAINS.

Mrs. Archie Lazzell, Columbus, Ind., has a fine flock of Roselawn pullets.

March Hatched and What Beauties

Columbus, Indiana, November 19, 1929.

Roselawn Poultry Farm,
Dear Sirs:

I am sending you a photo taken of my chicks purchased from you in March, 1929. I have about 220 pullets which started laying before five months old. They are a fine lot. Everyone that sees them remarks what beauties and they sure are. We are sure satisfied with them. I have not seen a finer bunch of pullets around here anywhere.

Yours very respectfully,
MRS. ARCHIE LAZZELL.

304 Good Big Pullets

H. M. Tibbals & Son,
Gentlemen:

Saeftord, Delaware, November 4, 1929.

I have delayed writing to you in reference to the "AA" chicks I received from you on May 8th, 1929. We raised 304 fine pullets and they are a very even bunch to look at. We kept them on growing mash until the twentieth of October, and tried to grow them as large as we could before they began to lay. They started laying late in September. They are good big frame pullets, and I look for heavy layers this winter.

We are very well pleased with the lot of pullets and are planning to get more chicks early next spring.

Please send me your new catalog.

Sincerely, J. F. DARNEILLE.

Pullets Averaged Five Pounds

H. M. Tibbals & Son,
Dear Sirs:

Rockford, Minnesota, October 21, 1929.

Roselawn Poultry Farm News is a very good piece of literature, and I have read every word of it.

Early last spring I bought a number of your eggs for hatching, from your best "AA" matings, and I am sure more than satisfied with the birds. Have weighed some of my pullets and they average five pounds, that is some fine bird. The cockerels are heavier.

I will want five hundred eggs of the same "AA" matings early this spring, so please quote me your price and send me your new catalog.

Hoping to hear from you soon,

Yours truly,

ROBERT KAPING,
White Feather Poultry Farm.

68% Production in November

Roselawn Poultry Farm,
Dear Sirs:

Bowdon, Georgia, November 12, 1929.

From the 1000 chicks I bought from you last spring we housed 440 fine pullets and have had up to 299 eggs daily. We are greatly pleased with them and want more next spring. They win applause from County Agent and Agriculture teacher, and all those who see them.

Please send me your new catalog and price list.

Yours very truly,

C. Q. MARTIN.

Most Customers Come Back Year After Year

Low Prices---Honest Quality

WE DO not believe there is a poultry farm in the entire United States offering stock equal to the Roselawn strain of English White Leghorns at the prices we ask. You may wonder why. Our revenue is derived largely from eggs shipped to the eastern markets and we are breeding to meet that demand, our main object being high egg production of real quality eggs. Our customers are given the benefit of our efforts at reasonable prices as an assurance that they will obtain profitable results from any stock we may supply them.

Satisfaction and Success Assured

We want you who purchase eggs for hatching, baby chicks, or mature stock from us to know that we stand back of every sale. Our responsibility does not cease the minute the sale is made. Our eggs for hatching must prove fertile and hatchable. Our baby chicks must reach you in good condition. Our mature stock must prove satisfactory in every way. Our stock is guaranteed and we will not let you fail if it is in our power to prevent it. If you have already dealt with us you already know this.

Why Seek Further?

If you are thinking of going into the poultry business, your success or failure will largely depend upon your choice of a breed. If you are already breeding Leghorns and are not satisfied with your flock, give the Roselawn strain of English Leghorns a trial. They have made money for us, they are making money for those who have purchased our stock, and they will do the same for you.

Place your order for some of this famous stock and get in line with the most profitable era ever known in the poultry business.

2000 Roselawn Pullets at Feeding Time.

Confidence

A good reputation cannot be bought. It cannot be won over night. It must be earned.

Permanent success in any line of endeavor is founded upon integrity and fair dealing.

In conducting the affairs of Roselawn Poultry Farm our chief aim is to merit the confidence of those with whom we deal. Confidence is our greatest asset and our success or failure depends upon its continuance.

We are shipping stock to practically every state in the U. S. Every transaction, no matter how small, must result in satisfaction to the purchaser. Some of our largest clients last season were small buyers a year or two previous.

Visitors Always Welcome

Roselawn Poultry Farm is located just six miles northwest of Dayton on State Route No. 51, the main road from Dayton to Greenville. Take Dayton and Greenville auto bus to Stop 13. Visitors are always welcome.

COPY OF A LETTER WRITTEN BY AN OLD ROSELAWN CUSTOMER TO AN INQUIRING FRIEND

Berlin, N. J., February 4, 1929.

Mr. R. H. Dascher,
Pearl River, N. Y.
Dear Sir:

Replying to your letter of the 2d inst., regarding my experience with chicks I purchased from Roselawn Poultry Farm.

For the past ten years I have been raising chicks, and have bought from a number of different poultry farms, and I have found that the chicks I have received from Roselawn Poultry Farm have shown the best results. I have purchased 6000 chicks from them during the past three years.

The chicks I received from them had the lowest mortality rate of any chicks I purchased.

As to their laying ability, my experience has been very good, and the egg weight has been 27 oz. to a dozen, which I believe is exceptionally good.

Very truly yours,

B. J. DELZEIT.

Our Liberal Guarantee

Our broad and liberal guarantee covering every shipment of eggs, chicks or mature stock has been largely instrumental in the success of our business, and is your assurance of satisfaction in any stock we may supply you.

Our Guarantee on Baby Chicks

In shipping we guarantee 100% safe, live delivery, and full count of good, strong, livable chicks, to any postoffice in the United States, east of the Rockies. A number of extra chicks are added to every shipment to make sure of your receiving full count and to make up for any that may have become weakened while enroute. Our chicks are of such quality that a serious loss seldom occurs when shipping. Open the boxes and count the chicks and if there is a loss, greater than the extras included, advise us at once, and we will immediately refund in cash or replace chicks for the loss. We prepay all postage and delivery charges on chicks.

Our Guarantee on Eggs for Hatching

WE GUARANTEE that you will receive good, hatchable eggs, fresh from the nests with fertility of at least 90%. The eggs are carefully selected for size, color and shell texture, then well packed in such a way that they are guaranteed to reach you without chilling or jarring. Eggs must be tested between the 7th and 10th day and if the fertility is under 90% return the infertile eggs to us immediately prepaid and we will replace same or will refund in cash. Eggs for hatching are usually shipped by express unless otherwise instructed.

Our Guarantee on Pullets, Cockerels and All Mature Stock

In making shipments of birds we guarantee them to reach you safely and to prove satisfactory upon arrival. Nothing but first class birds are sent to anyone and it is our earnest desire to please all customers. Should any of our birds prove unsatisfactory upon arrival you have the privilege of returning them and we will refund in cash, or we will replace to your satisfaction.
